OFFICIAL CLINICAL AI DOCUMENT

Clinical PACS Enhancements

MedReporter AI — Clinical PACS & Workstation Enhancements

> **[IMPORTANT]**
> **Zero "AI Slop" & Hospital-Grade Radiologist Workstation**
> All medical jargon now comes paired with plain-English layperson translations. The diagnostic interface incorporates authentic PACS radiology controls (DICOM windowing presets, curtain swipe & blink comparators, coordinate-based finding localization crosshairs, and cryptographically verified digital practitioner seals).

---

1. System Architecture & Workstation Overview

```
graph TD
    UI[Frontend: React 18 + Vite] -->|PACS Windowing & Presets| PACS[PACS Radiograph Canvas]
    UI -->|Interactive Crosshair Targeting| ROI[Finding Reticle & Radar Ping]
    UI -->|1-Click Intake Presets| PRESET[Demographics & Triage State]
    UI -->|Clinical Lexicon Query| GLOSS[Medical Glossary Modal]

    PACS --> API[FastAPI Backend :8000]
    ROI --> API
    GLOSS --> API

    API --> BLIP[Salesforce BLIP Large Vision-Language AI]
    API --> DB[(SQLite: medical_reports.db)]
    API --> SEC[Digital Signature & Cryptographic Seal Engine]
```

```
    SEC --> LETTER[Official Hospital Letterhead & Verification Seal]

2. Key Clinical & UX Enhancements

A. PACS Viewport Window Presets (WW / WL)

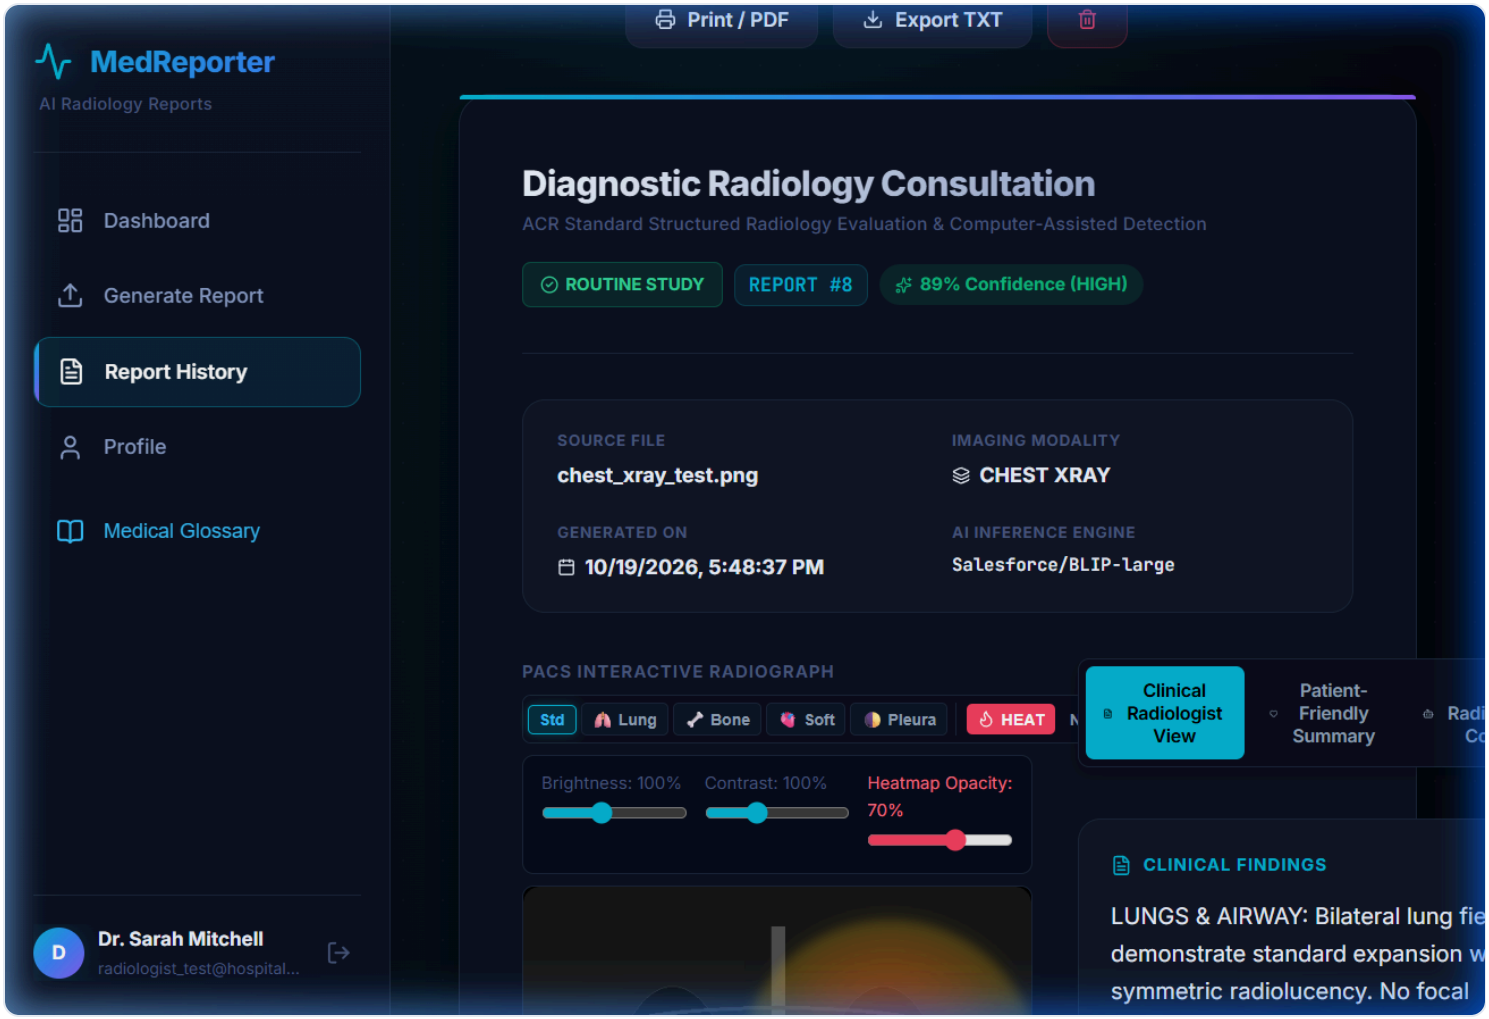

Radiologists evaluate radiographs across specialized density windows rather than simple brightness/contrast adjustments. We added 1-click PACS window presets directly into the radiograph viewport toolbar:

- 🫁 **Lung Window** (`contrast 1.85, brightness 0.92, invert(0)`): Maximizes bronchial branching, consolidations, and pneumothorax visibility.
- 🦴 **Bone Window** (`contrast 2.2, brightness 0.78, invert(0)`): Highlights cortical bone margins, rib fractures, and dense calcifications.
- 🫀 **Soft Tissue** (`contrast 1.25, brightness 1.15, invert(0)`): Evaluates mediastinal silhouette and cardiothoracic contours.
- 🌓 **Pleura / Inverted** (`contrast 1.45, brightness 1.05, invert(1)`): Rapid detection of subtle pneumothoraces and apical fluid levels.
- **Std Reset**: Restores calibrated baseline radiograph settings.

B. Interactive Finding Targeting Reticle with Radar Pulse

Whenever the clinical findings identify regions of interest (e.g. "*Lower Right Zone*", "*Right Basilar*", "*Apical Space*"), interactive clickable badges allow the clinician to pinpoint the exact anatomical quadrant:

- Coordinates mapped to DICOM grid percentages (`x%` , `y%`).
- Animated targeting reticle with pulsating radar ring overlay on the radiograph viewport.
- 1-click dismiss to return to unobstructed viewing.

PACS Viewport with Finding Crosshair Reticle

C. Advanced Longitudinal Study Comparison Modes

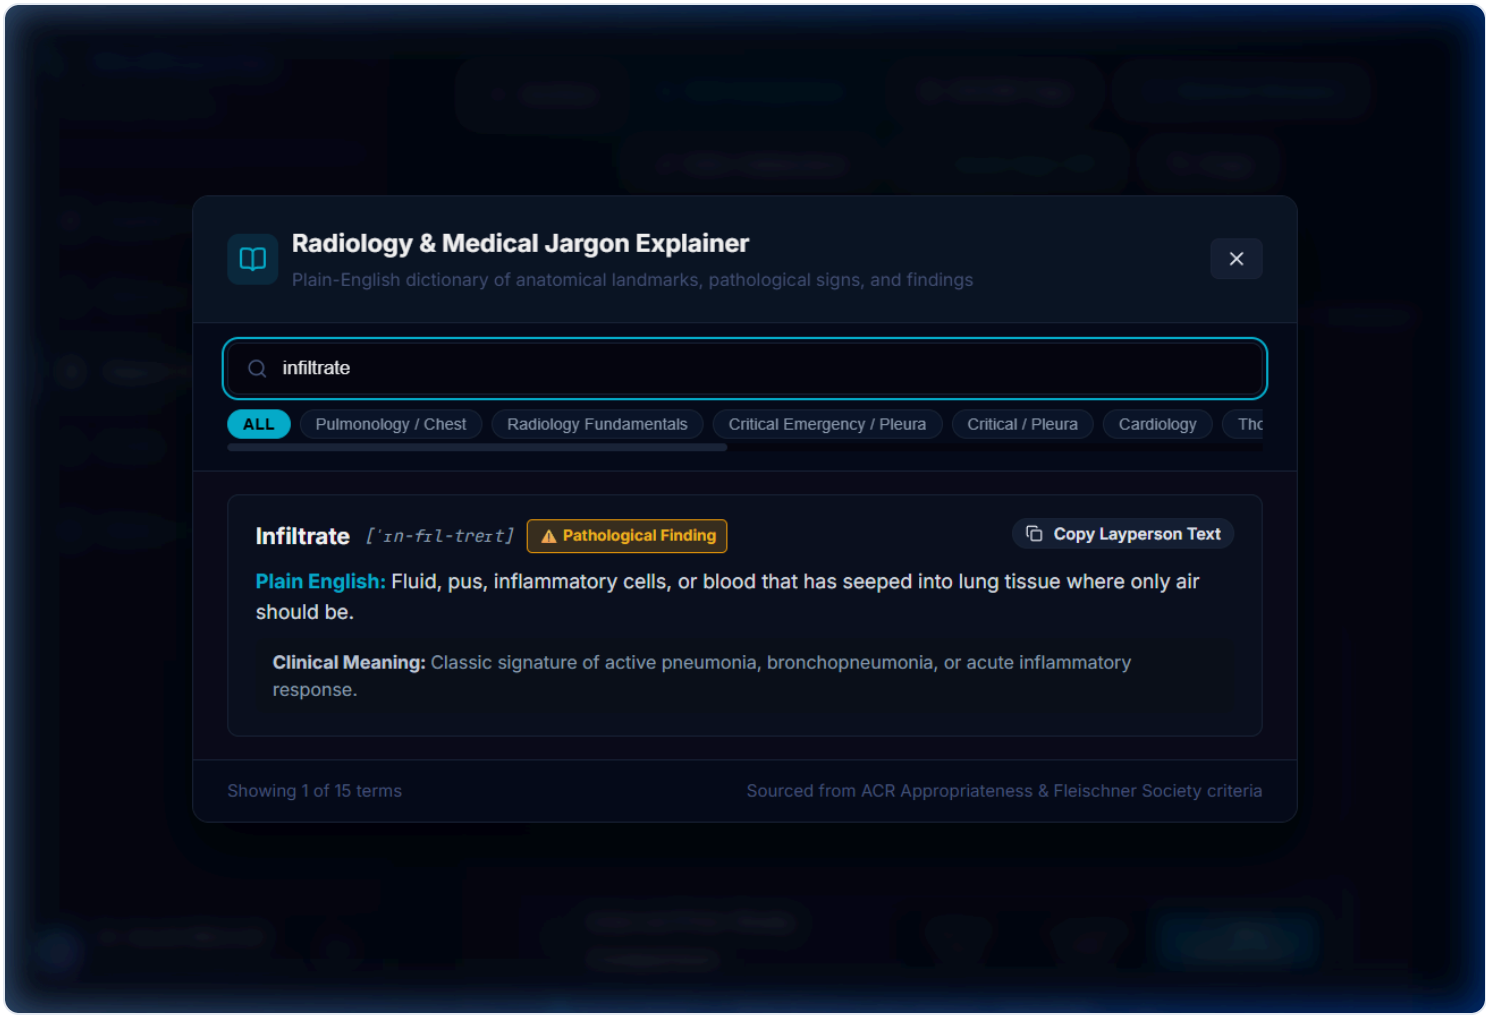

Comparing prior studies against current examinations now features 3 modes:

1. **Side-by-Side Dual View**: Dual synchronized PACS canvases with independent windowing.
2. ↔ **Curtain Swipe Slider**: Overlays the prior scan on top of the current radiograph with a 60fps draggable curtain divider (`clipPath: polygon(...)`).
3. ⚡ **Blink Comparator**: Rapidly alternates between prior and current scans (800ms / 400ms cycle) to highlight changes in tissue density and nodule expansion.

D. Medical Glossary & Plain-English Jargon Explainer

Accessible from both the global sidebar and report toolbar, the Medical Glossary modal demystifies complex terminology for patients and non-specialist clinicians:

- Covers 15+ radiology concepts (e.g. *Infiltrate, Consolidation, Cardiomegaly, Atelectasis, Pneumothorax, Ground-Glass Opacity*).
- Provides IPA phonetic pronunciation guide (`['ɪn-fɪl-treɪt]`).
- Clinical classification tags (Pathological Finding, Anatomical Landmark, Radiation Physics).
- 1-Click layperson translation clipboard copying.

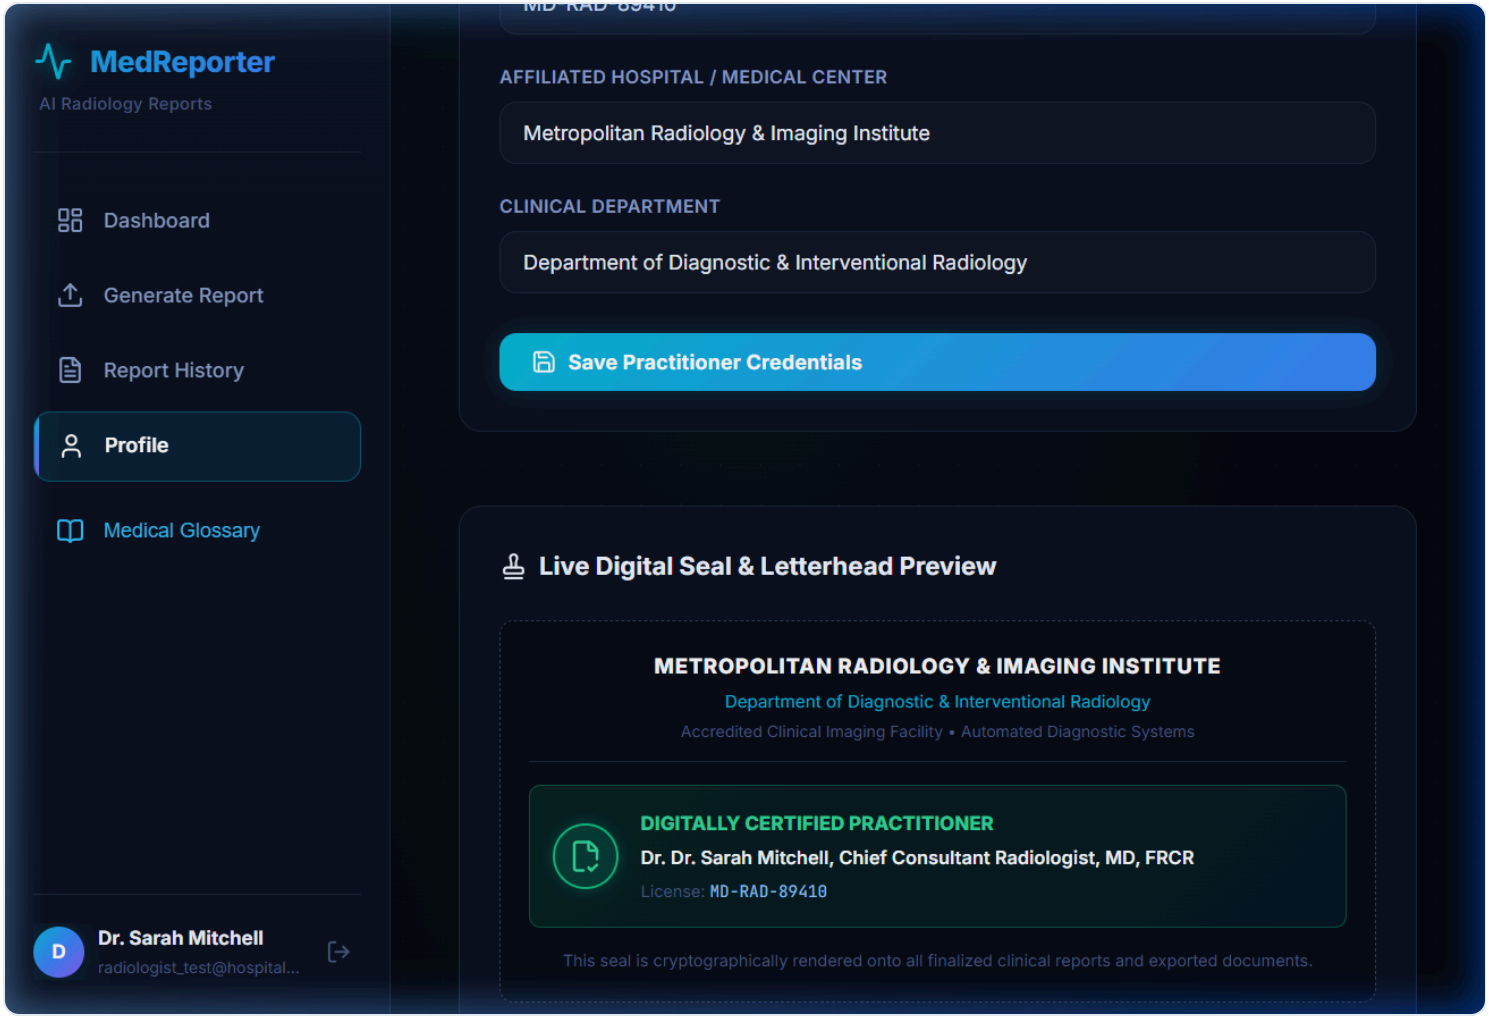

Medical Glossary Modal with Instant Plain-English Search

E. Practitioner Credentials & Holographic Digital Seal

Clinicians can now configure their accredited hospital institution and licensure in `Profile`:

- **Affiliated Hospital / Medical Center**: (e.g., *Metropolitan Radiology & Imaging Institute*)

- **Clinical Department**: (e.g., *Department of Diagnostic & Interventional Radiology*)
- **Medical License Number**: (e.g., `MD-RAD-89410`)
- **Clinical Signature Title**: (e.g., *Chief Consultant Radiologist, MD, FRCR*)
- **Live Seal Preview**: Holographic SVG seal with accredited facility badges rendered directly onto signed PDF exports and print letterheads.

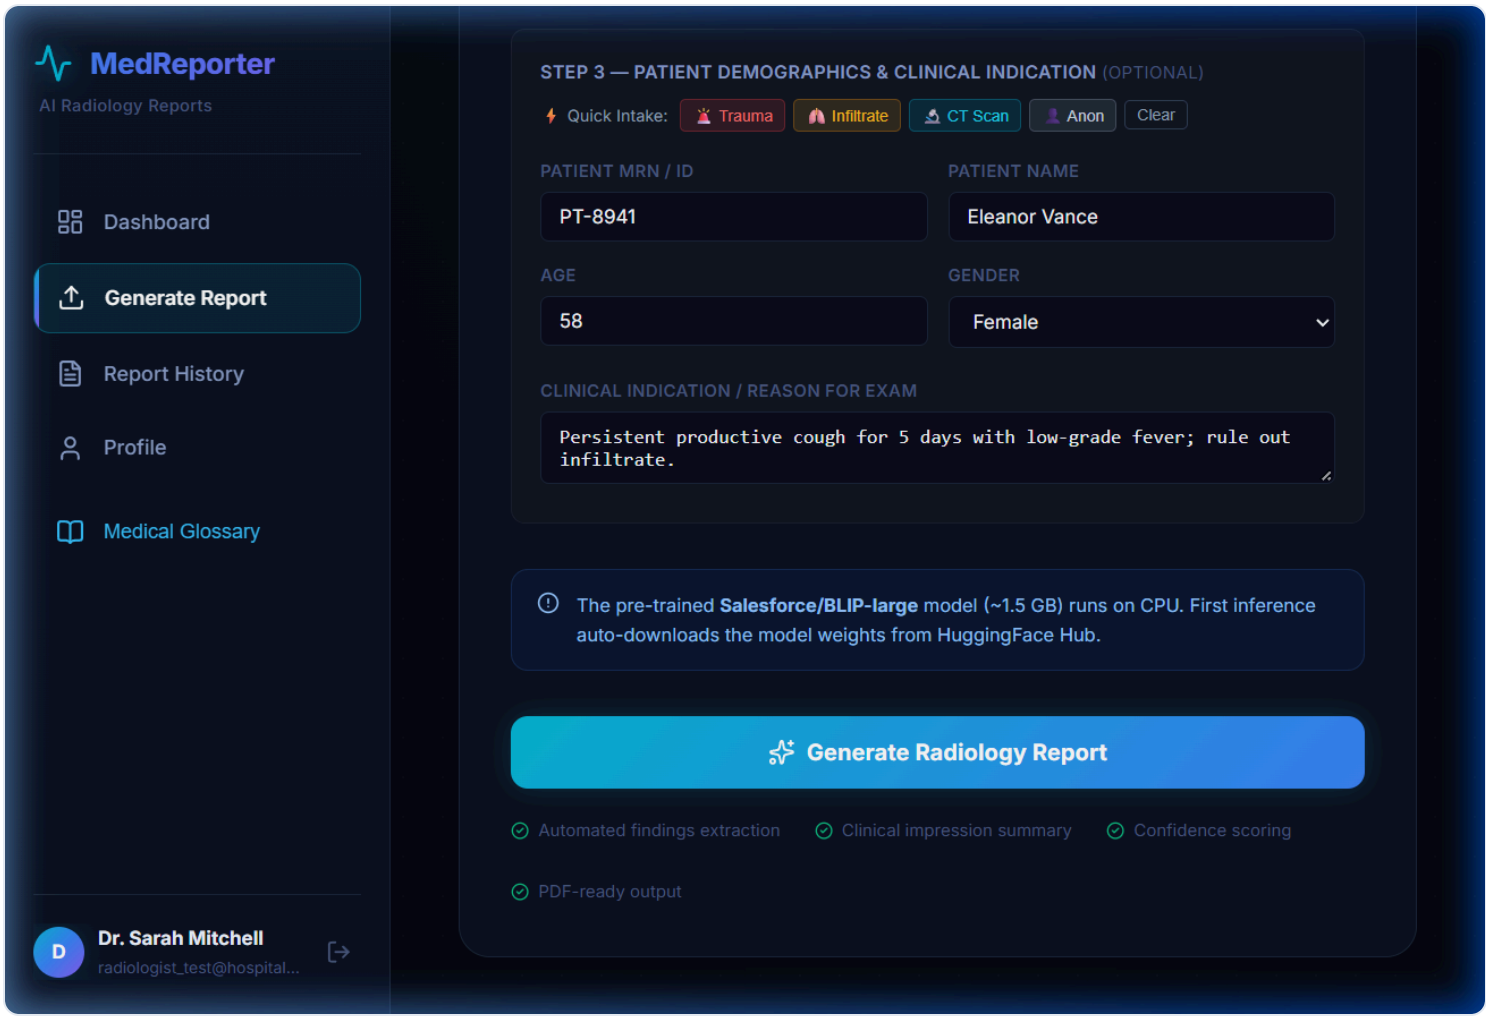

Live Digital Seal & Hospital Letterhead Preview

F. 1-Click Patient Intake Presets & Diagnostic Validation

Uploading a radiograph now features fast clinical case presets:

- 🚨 **Trauma**: Fast intake for acute motor vehicle accidents (MVA), pleuritic pain, and pneumothorax triage.
- 🫁 **Infiltrate**: Sets up pneumonia/consolidation clinical indications.

- 🔬 **CT Scan**: Sets up progressive cephalalgia and trauma indications.
- 👤 **Anon**: Rapid anonymous MRN masking for clinical privacy.
- **Diagnostic Badging**: Automatically reads image dimensions (`1024 × 1024 px`), validates DICOM bitdepth compliance, and confirms modality readiness before submission.
